

Scientific Games Systems Technology to Power Loto-Québec's Retail and Digital Sales

Company's Momentum Ecosystem Chosen by Four North American Lotteries in Past Year

ATLANTA – October 13, 2025 – [Scientific Games](#) has been selected to provide a new central gaming system to [Loto-Québec](#) following a competitive procurement process. The global lottery company will deliver the advanced central gaming system through its *Momentum* ecosystem — an integrated framework of technologies, applications and services designed to work together to optimize lottery performance. The technologies deployed will replace the Corporation-managed legacy system, delivering industry-leading performance and security to power Loto-Québec's retail and digital networks, and maximize contributions to the Corporation's good causes that bring Québécois together.

"We are honored to further expand our more than 50-year successful relationship with Loto-Québec as its central gaming systems provider," said **John Schulz, President, Americas & Global Instant Products for Scientific Games**. "Our advanced system is engineered for the future, delivering the performance, security and operational efficiencies that will support Loto-Québec's sales and sustainability."

Since December 2024, Scientific Games' central gaming systems technology has been chosen by several other North American lotteries, including the [Ohio Lottery](#) and [New Mexico Lottery](#). Globally, over the last decade, the company has completed 50 lottery system implementations and conversions, most recently for [The National Lottery](#) in the UK with partner Allwyn UK and for [Lotto New Zealand](#).

In Canada, Scientific Games supports Loto-Québec and other provincial lotteries from its operations in Montréal.

"Our Montréal facility has a long history of collaboration with Loto-Québec. Our employees in Montréal are ready to take on this new opportunity," said **Marc-André Doyon, Regional Vice President of Operations for Scientific Games**. "For decades, Scientific Games has produced more than 4,500 instant scratch games for Loto-Québec, including its very first scratch game."

With this new agreement, Loto-Québec was seeking a cloud-based, scalable solution at the forefront of the transformation of the lottery, technology and information security industries. Scientific Games will provide and manage the new systems technology as part of its *Momentum* ecosystem, which connects retail, digital and operational solutions into one integrated

framework. This new contract extends the existing partnership, which includes producing innovative instant scratch games, and recently, the company's [award-winning PlayCentral retail self-service terminals](#).

Designed for flexibility, security and speed to market, the new gaming system facilitates rapid integration, real-time communication management and proactive network monitoring and issue response. The system also provides seamless digital integration across retail and online channels, ensuring a connected player experience. The system exceeds industry standards and safeguards mission-critical lottery infrastructure.

Currently serving 150 government-regulated lotteries in 50 countries, Scientific Games is the world's largest lottery games creator, producer and manager and the fastest growing lottery systems provider.
